

GIT ASSIGNMENTS

QUESTION 1:

While traveling, you meet an IT professional who writes plays in their spare time. They are working on a play that really resonates with you. Part of the concept of the play is that it is open source. After a spirited discussion on your flight, they tell you about the repository where the play is kept and encourage you to get involved. To contribute, you will first need to install Git and configure it with your name and email address. Once that is done, you need to pull down the repository into /home/<user-name>/play/ on the provided workstation host. Create a new branch named after your first name to begin your piece of the story. Create a new text file with your story and add it to the branch. Also, add your name to the contributors.txt file within your branch. Be sure to track your work with git and commit your changes to your local repository and use the commit message "airplane story" so your travel buddy will remember who you are!

ANSWER 1:

```
vr26@LIN82000705 MINGW64 ~/desktop/git/test (master)
$ git branch newbranch

vr26@LIN82000705 MINGW64 ~/desktop/git/test (master)
$ git checkout newbranch
Switched to branch 'newbranch'

vr26@LIN82000705 MINGW64 ~/desktop/git/test (newbranch)
$ touch contributors.txt

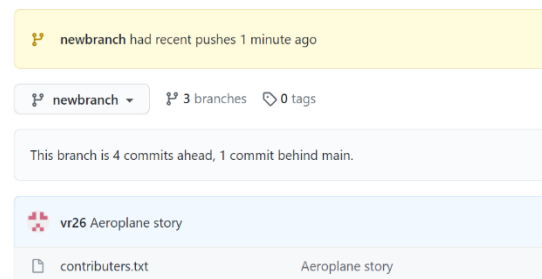

vr26@LIN82000705 MINGW64 ~/desktop/git/test (newbranch)
$ vi contributors.txt

vr26@LIN82000705 MINGW64 ~/desktop/git/test (newbranch)
$ git add -A
warning: LF will be replaced by CRLF in contributors.txt.
The file will have its original line endings in your working directory

vr26@LIN82000705 MINGW64 ~/desktop/git/test (newbranch)
$ git commit -m "Aeroplane story"
[newbranch e0a2084] Aeroplane story
1 file changed, 1 insertion(+)
create mode 100644 contributors.txt

vr26@LIN82000705 MINGW64 ~/desktop/git/test (newbranch)
$ git push origin master
Everything up-to-date

vr26@LIN82000705 MINGW64 ~/desktop/git/test (newbranch)
$ git push origin newbranch
Enumerating objects: 4, done.
Counting objects: 100% (4/4), done.
Writing objects: 100% (3/3), 283 bytes | 31.00 KiB/s, done.

To https://github.com/venkateshkrishnan7053/ASSIGNMENT.git
 * [new branch]      newbranch -> newbranch
```

SUMMARY 1:

STEP 1: CREATE A NEW BRANCH NAMED NEWBRANCH

STEP 2: CREATED A FILE NAMED CONTRIBUTORS.TXT

STEP 3: CHANGED MADE IN FILE

STEP 4: PUSHED TO GITHUB

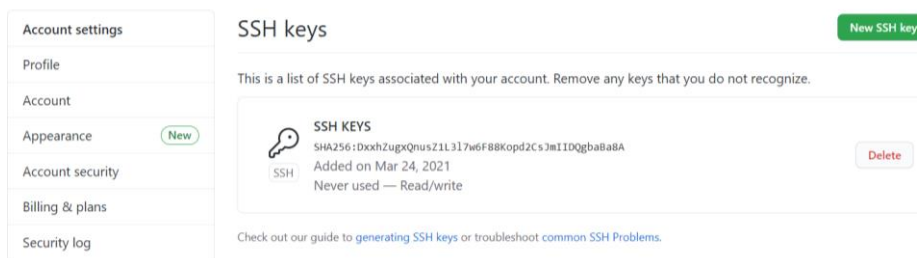

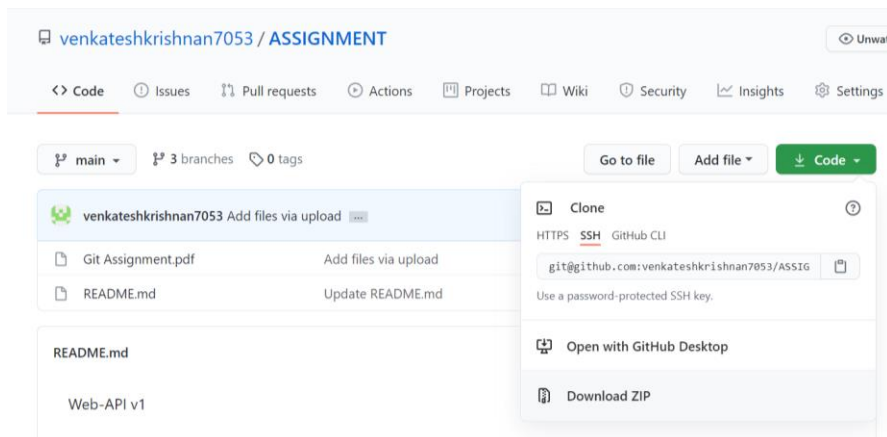

GIT ASSIGNMENTS

QUESTION 2:

In your efforts to better support a development organization, you have begun experimenting with Git source control and its interactions with GitHub. In order to be able to provide secure access to any repositories that are in use, you will create a special SSH key (separate from any that may have been created for other local systems to authenticate through) to be able to make an exchange with GitHub, and identify a service account called 'cloud_user' with your own account.

You will need to use the OpenSSH Client's utilities to create this key. First, create a subdirectory in your account's home directory called 'githubkeys'. Using the appropriate tool, you will create a new key (the default encryption type and size will be acceptable according to your organization's security policy) in this new directory called 'github-service-key'. Once you have this key, find the public key file that matches then copy and paste that into the appropriate account profile information in GitHub. After giving the key a reference name, you should see it appear in the list of your authorized keys, that will confirm it is available for use when trying to securely connect to your account.

ANSWER 2:

SUMMARY 2:

STEP1: CHECK GIT, IS THERE ANY CONNECTION EXIST WITH SSH

STEP 2: IF NO, GENERATE A SSH KEY USING

```
ssh-keygen -t ed25519 -C "your_email@example.com"
```

GIT ASSIGNMENTS

STEP 3: AND USE THE PATH MENTIONED IN CMD TO FIND THE KEY.

STEP 4: ONCE DONE, PASTE IT IN GITHUB>SSH KEY> ADD KEY.

QUESTION 3:

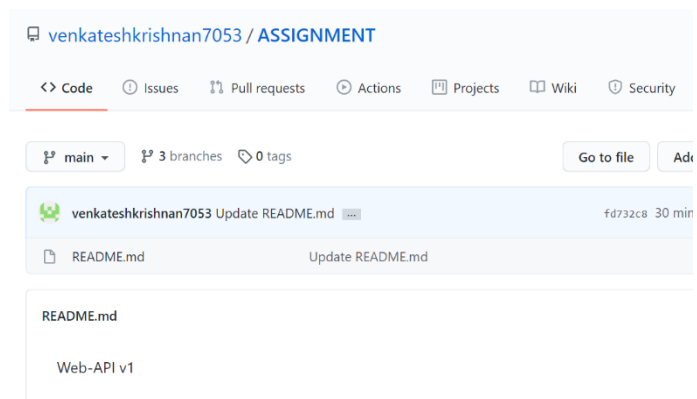

The development team in your organization is working on a new Web-based API. They have deployed a central server that they intend to use as a local Git repository for source control. They have managed to configure some of the global settings for the service account they want to use as the Git user, but are having difficulties in getting started with an empty repository.

As a result, they have provided you with the credentials for the service user and credentials to access their server. You have been asked to initialize a new Git repository in the /home/<user-name> directory called 'web-api'.

Once you have this new repository created, create a file called 'README.md' (be careful to mind the case of the file in order to follow your corporate standards for README files) that contains "Web-API v1" text. You will then need to add that file to the repository and commit the changes to the repository. Once you confirm that the default branch is up-to-date with no changes to commit, you may turn it back over to the team for use.

ANSWER 3:

```
cd
vr26@LIN82000705 MINGW64 ~/desktop/git/web-api (master)
$ cd web-api
vr26@LIN82000705 MINGW64 ~/desktop/git/web-api/web-api (main)
$ ls
README.md
$ cat
vr26@LIN82000705 MINGW64 ~/desktop/git/web-api/web-api (main)
$ cat README.md
# web-api
vr26@LIN82000705 MINGW64 ~/desktop/git/web-api/web-api (main)
$ git status
On branch main
Your branch is up to date with 'origin/main'.
nothing to commit, working tree clean
```

SUMMARY 3:

STEP 1: CREATED ANOTHER REPO IN GITHUB NAMED AS web-api

STEP 2: CREATED THE README.md

STEP 3: MODIFIED THE README FILE IN GITHUB

STEP 4: PULLED TO LOCAL

STEP 5: COMMITTED IT

STEP 6: GIT STATUS – NO COMMITS TO DO

GIT ASSIGNMENTS

QUESTION 4:

One of your company's developers noticed that the word readme was misspelled in the web api's git repository readme file.

The company policy dictates that all modifications are to be made in branches, and that these branches are to remain intact and not deleted. until reviewed by a senior developer. You have been asked to log into the central server used for maintaining the git repository for the web api, which is located in the <user-name>'s home directory, and correct the spelling within the file. You are to use a branch named 'fix-readme', and merge the corrected file back into the master branch when finished. Again, do not remove your branch. Once you have completed this task, hand the system over to the lead developer for approval.

ANSWER 4:

```
MINGW64/c/Users/vr26/desktop/git/web-api/web-api
vr26@LIN82000705 MINGW64 ~/desktop/git/web-api/web-api (main)

SUMMARY 4:

STEP 1: CREATED A FIX-README BRANCH

STEP 2: FIXED THE ERROR

STEP 3: COMMITTED THE CHANGES

STEP 4: PUSHED THE BRANCH TO REMOTE

STEP 5: SWITCHED TO MAIN AND MERGED THE NEWLY CREAATED BRANCH

STEP 6: PUSHED TO REMOTE

QUESTION 5:

In this exercise, you are one of a team of developers. Your team uses feature branches to manage changes. You have been asked to make a change to the train-schedule app. Instead of the app's main page header reading "Train Schedule," the customer wants it to read "Find your train!" or vice-versa (You may find the text the reverse of what is said so please do the reverse). This text can be found in the project file views/index.jade, and you're going to have to change it.

ANSWER 5:

```
MINGW64/c/Users/vr26/desktop/git/train-schedule-app/views
vr26@LIN82000705 MINGW64 ~/desktop/git (master)
$ git clone https://github.com/venkateshkrishnan7053/train-schedule-app.git
